

Simplify Your Revenue Cycle Workflow

By turning your unique knowledge and expertise into highly tailored rules that auto correct billing and coding errors, we create a dramatically more efficient revenue cycle workflow. This means you can take control of the information and the process, and free up your team to focus on only the most important issues.

Customization & Control

We'll work with you to identify critical areas where custom rules can dramatically reduce the burden of manual effort by automatically correcting routine billing and coding errors.

Fix Bad Data Up Front

Since providers didn't go to medical school to become coders, you end up with a lot of errors to sort through. RCxRules cleans data before your RCM system, saving you countless hours of manual rework.

Build a Knowledge Base

RCxRules gives you one location to host your organization's billing and coding knowledge, allowing you to keep up with ever-evolving payer requirements and make sure everyone on your team handles billing and coding issues exactly as instructed for every encounter.

Optimize Staffing

Historically, the process to review charges for billing and coding accuracy required extensive and expensive staffing. With RCxRules, that outdated approach is a thing of the past. RCxRules identifies only those charges that require manual review, so your team can focus their efforts where they're needed most.

100%

of charges automatically verified against industry standard and client-specific rules

Charges are validated against over

4 million

billing and coding conditions

Automatically corrects

50%

of the billing issues identified
